

## Take Ownership of Your Software

Our implementation methodology, Success Path™, is grounded in collaborative training and driven by active communication, both within Fonteva and with our customers - all to implement your software both on time and on budget.

### **SIDE-BY-SIDE CONFIGURATION**

Our implementation is an iterative and collaborative process that pairs your team with ours to configure requirements simultaneously.

### **ELIMINATE THE NEED FOR CUSTOM CODE**

We work to meet your business needs with configuration, rather than custom code. This ensures that all of our customers remain on the latest version of the software with no downtime during upgrades.

### **CHALLENGE THE STATUS QUO**

Our success is hinged on the success of our customers, so we work together to evaluate and improve your business processes, while challenging the status quo.

### **CHANGE MANAGEMENT & USER ADOPTION**

We enable you and your team to learn the solution, understand how to configure it to your needs, and confidently take ownership of your solution.

### **REAL-TIME TRAINING**

We include ample training time in our implementation process before, during, and after the implementation project.

## Choose Your Path

We offer a variety of implementation paths to meet the needs of any organization. Whether you are looking for a quick implementation process, or you require a more tailored approach, Fonteva's Success Path™ will facilitate a sense of ownership and empower you to make the most of your new system.
